

Why should we be blocked from accessing our local weather just because NAB feels threatened by competition? If NAB were able to block XM from broadcasting local weather then shouldn't cable be banned from showing local channels with weather? We are paying for a service that does not violate any laws or others' rights! Do not let businesses decide that XM is not acceptable just because it's competition for them! If anything it motivates competition and other businesses to put out a better product to survive. DO not let another form of business be suppressed because others fear for their own.
